

## GEORGETOWN UNIVERSITY PUBLIC POLICY 646 DATA VISUALIZATION INSTRUCTIONS PEER FEEDBACK SESSION Snapshot due to your group members by 11:59 pm, April 21, 2023 Prof. Wesley Joe

We'll hold the peer feedback session during our final class meeting, April 27, 2023.

For the feedback session, I'll divide the class into groups of 5 or 6 students each. (I'll send each of you an e-mail list of your group members next week.) Groups will meet simultaneously for nearly the entire class session.

For the feedback session, select the following "snapshot" of your work so far to share with the other members of your group:

- 5 of your interim static (that is non-interactive) visualizations that you consider among the most interesting that you have created, and
- 5 of your interim static visualizations that you believe would benefit most from further refinement with the help of your peers' feedback.

The visualizations can come from any previous assignment, including your data story. Combine a total of <u>10</u> static visualizations into <u>one</u> PDF file. At least 8 of the static visualizations should have been created in R. If you created some of your static visualizations in Tableau, print those graphs to PDF files, refine them in Illustrator (if you have time), and include them in the <u>one</u> PDF file that you share with the other members of your group.

Optionally, you can substitute one interactive Tableau visualization for one of the Tableau static visualizations mentioned above. If you choose this option, please submit the interactive visualization as a separate TWBX-format file. Only a TWBX file will include the data; your group members will need the data to see your cool Tableau work! If your data set is too large to send as part of a Tableau packaged workbook file, please let me know and we'll work out how to submit the deliverables.

Let me reiterate a point that I made in class. <u>It is understood that the visualizations you share for this session are still interim "works in progress."</u> In other words, you do not need to try to create a final portfolio to for the feedback session. Rather, you're going to get feedback from a knowledgeable, informed focus group of sorts and use it as you wish to refine your work for the final portfolio.

I will create a Google Drive folder for each group and, within each group folder, a folder for each group member.

Please upload your PDF file and, if applicable, TWBX-format Tableau files to your Google Drive folder by the deadline mentioned above. In our next class meeting, I'll provide detailed instructions for submitting your final portfolio.
